

CLIMATEGENERATION
A WILL STEGER LEGACY

Slide	Title	Talking Points
1	Climate Change and _____	
2	Story/Value	
3	Story/Value	
4	The climate is changing	Increase in heat
5		Increase in precipitation
6		Increase in extreme weather events
7	Climate Change	Climate change is caused, in part, by the human-made blanket of carbon dioxide that is building up around the Earth and trapping in heat.
8	Fossil Fuels Burning	The heat trapping blanket is thickened by burning large quantities of fossil fuels such as coal, oil and natural gas. By burning these fossil fuels, we release carbon dioxide into the air where it builds up and traps heat that would otherwise escape. This blanket effect leads to the warming of the planet, and the atmospheric balance that keeps the climate stable is disrupted.
9	This change in climate has many repercussions globally	
10	Global impact	

CLIMATEGENERATION
A WILL STEGER LEGACY

11	And here in _____	
12	Local impact	
13	Local impact	
14	Local impact	
15	Fortunately there are solutions we all can engage in now together
